

Normal Eye

In the normal eye, light from distant objects is focused on the retina resulting in sharp vision.

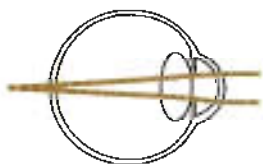

Myopic Eye

In the nearsighted eye, light from distant objects is focused in front of the retina resulting in blurred vision.

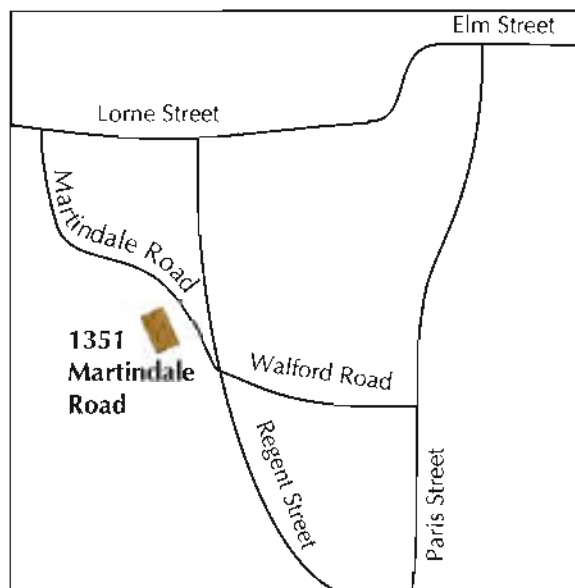

Hyperopic Eye

In the farsighted eye, light from distant objects is focused too weakly for the length of the eye resulting in blurred vision.

For more information about the exciting realities of laser vision correction contact your eye care professional or call the Sorgini Eye Institute.

See Life
At Its Best

SORGINI
EYE INSTITUTE

Imagine....

- > what life would be like without glasses or contact lenses
- > seeing the alarm clock in the morning
- > swimming, waterskiing, snorkeling and being able to see
- > not having to worry about fogged glasses
- > a career in aviation or law enforcement
- > snowmobiling without glasses

Reality

At the Sorgini Eye Institute, state of the art excimer laser and LASIK equipment could help make this a reality. Myopia, hyperopia and astigmatism can now be treated with excellent results. Although PRK, LASIK and LASEK may be performed, most patients prefer LASIK.

LASIK

LASIK is a painless laser procedure performed using only eye drops for freezing. The entire procedure takes less than 15 minutes and vision improvements are usually seen within 24 hours. Patients are usually able to return to work and most normal activities within 2 days.

Wave Front Technology

The Sorgini Eye Institute offers the latest technology in individually customized laser treatment. Perfect vision has never been more attainable.

Dr C J Sorgini

Dr Sorgini is the medical director and sole operator of the Eye Institute. He is a fellowship and subspecialty trained corneal surgeon and belongs to Canadian, American and International refractive societies. He has extensive experience in laser vision correction.

The Clinic

The Sorgini Eye Institute is an advanced diagnostic and treatment facility. The staff of specially trained nurses and coordinators has experience with thousands of patients considering laser vision correction.

Ideal Candidate

If you are at least 19 years of age with a stable prescription and otherwise healthy eyes, you may be a candidate. Discussion with your eye care professional or a free consultation with Dr Sorgini will determine your suitability for laser vision correction.

Results

Millions of excimer laser procedures have been performed around the world. Although no procedure is without risks, over 95% of LASIK treated patients are able to swim, ski, and drive without glasses or contact lenses.
